

TF Semiconductor
Solutions

TF2103M

Half-Bridge Gate Driver

Features

- Floating high-side driver in bootstrap operation to 600V
- Drives two N-channel MOSFETs or IGBTs in a half bridge configuration
- Designed for enhanced performance in noisy motor applications
- 290mA source/600mA sink output current capability
- Outputs tolerant to negative transients
- Internal dead time of 420ns to protect MOSFETs
- Wide low side gate driver supply voltage: 10V to 20V
- Logic input (HIN and LIN*) 3.3V capability
- Schmitt triggered logic inputs
- Undervoltage lockout for V_{CC} (logic and low side supply)
- Extended temperature range: -40°C to +125°C

Applications

- Motor Controls
- DC-DC Converters
- AC-DC Inverters
- Motor Drives

Typical Application

Description

The TF2103M is a high voltage, high speed gate driver capable of driving N-channel MOSFETs and IGBTs in a half bridge configuration. TF Semiconductors's high voltage process enables the TF2103M high side to switch to 600V in a bootstrap operation.

The TF2103M logic inputs are compatible with standard TTL and CMOS levels (down to 3.3V) to interface easily with controlling devices. The driver outputs feature high pulse current buffers designed for minimum driver cross conduction. TF2103M has a fixed internal deadtime of 420ns (typical).

The TF2103M is offered in a SOIC-8(N) and PDIP-8 package and operates over an extended -40 °C to +125 °C temperature range.

Pin Descriptions

PIN NAME	PIN NUMBER	PIN DESCRIPTION
V_{CC}	1	Logic and low side supply
HIN	2	Logic input for high-side gate driver output in phase with HO
LIN*	3	Logic input for low-side gate driver output out of phase with LO
COM	4	Low-side and logic return
LO	5	Low-side gate drive output
V_S	6	High-side floating supply return
HO	7	High-side gate drive output
V_B	8	High-side floating supply
